

# UNIX

UNIX® is a family of operating systems which has multi-user and multi-tasking capabilities for a wide range of hardware from different vendors. Since the development in 1969, at the Bell Labs, it became one of the most reliable operating systems and it is used by major companies for running their high critical applications.

The important UNIX® flavors are :

- BSD:

- FreeBSD

- Mac OS X

- OpenBSD

- NetBSD

- SunOS

- Ultrix

Compaq Tru64 UNIX (formal OSF/1 and Digital UNIX)  
Linux

Minix

System V:

- AIX

- HP-UX
- IRIX
- SCO UNIX
- Solaris (opvolger van SunOS)
- Xenix

Why choose Iris-Ict Consultants for your Unix environment?

The IRIS UNIX® consultants are chosen because of their flexibility, high quality services, predictability, consistency and the best price/performance. There are many areas in which we can make a positive contribution to your business, by structuring our input to meet your specific requirements.

IRIS ICT helps their clients in controlling their development and operations costs within the limits. IRIS UNIX® consultants are kept up to date to the different changes on the UNIX® market (hardware and software) and we advise our clients in the implementations of these changes.

IRIS ICT has the competence in the different major UNIX® flavors.

We can be an added value in:

- Design of new and to optimize existing systems
- High Availability
- Installation and upgrades
- Consolidation
- Data protection and storage
- System administration and day to day operations.
- Virtualization and logical partitioning
- Consolidation of servers
