

Mainframe

Estimates show that over 72% of the world's business applications run on Mainframes and these applications handle the core business systems and processes of the organisation. In today's on-demand environment, IT organisations require highly reliable and stable systems that take care of these core systems.

IRIS ICT is a pioneer in providing IBM mainframe services and has been providing consulting and mainframe application development & management services since its inception.

Our company has vast technology expertise and in-depth experience in offering best-of breed solutions designed to deliver real business value to customers.
